BENJAMIN B. ENGEN

Steamboat Springs, CO • (303) 907-5467 • benjamin.engen@gmail.com • www.linkedin.com/in/benjamin-engen

SKILLS

SQL, Python, dbt, Snowflake, BigQuery, Prefect, Airflow, MonteCarlo, Looker, Omni, Tableau, Fivetran, Google Cloud Platform (GCP), Amazon Web Services (AWS), Git, Data Analysis, Econometric Modeling, Machine Learning, Sentiment Analysis (NLP), Market Research, HTML, SalesForce, Segment, Google Analytics, GIS

EDUCATION

MASTERS OF BUSINESS ADMINISTRATION (MBA)
University of Colorado at Boulder — *Boulder, CO*

BACHELOR OF ARTS (BA)
University of Colorado at Boulder — *Boulder, CO*
Political Science, Economics, Mathematics

EMPLOYMENT

ANALYTICS ENGINEER — SEPTEMBER 2025 – PRESENT
Thimble New York, NY
Owner of Thimble's data and analytics stack. Currently engaged in a one-year effort to implement a total re-architecture of the stack using Snowflake, dbt, and Omni.

STAFF ANALYTICS ENGINEER — FEBRUARY 2024 – MARCH 2025
The Zebra *Austin, TX*
Promoted after my first full year to become the Data Team's chief technical liaison to the rest of the company and led all subsequent initiatives impacting more than one team.

- Kicked-off and oversaw a year-long, master data management initiative to unify user data across enterprise systems, creating a 20% improvement in user acquisition attribution.
- Redesigned the data warehouse architecture within 18 months, transitioning from ad-hoc models to standardized data products, enhancing data accessibility and reliability.
- Implemented a framework for dynamic allocation of Snowflake compute that, combined with the above, trimmed Snowflake credit use by one-third.
- Began the implementation of a strategy to improve the monitoring of personally identifiable information (PII) by utilizing dbt to track the lineage of such information through our data warehouse.
- Developed a data product strategy and roadmap for the delivery of a new suite of business facing Looker Explore's built around the Metric Tree framework.
- Completely overhauled the business' approach to marketing attribution, creating a new data pipeline and Looker Explore enabling side-by-side comparison of common methods of marketing attribution.
- First engineer within the data department to receive a unanimous exceptional rating in every category of my annual performance review.
- Created and led an informal training program for my fellow Analytics Engineers called the "Analytics Engineering Guild" that grew into one of the most attended and impactful standing meetings in the Engineering department.

SENIOR ANALYTICS ENGINEER — SEPTEMBER 2022 – FEBRUARY 2024
Owned and maintained the dbt repository that powered analytics for The Zebra.

- In my first six months, led the data implementation during the transition of our entire sales CRM with zero gaps in our reporting and no sustained downtime.
- Led a two-month, cross-functional effort collaborating with our finance stakeholders to audit our financial data and eliminate reporting errors in advance of our annual audit.

- Developed the first coherent framework for the better governance of our data via stronger monitoring, testing, alerting, and organization.
  - Introduced monitoring for native dbt tests via Monte Carlo.
  - Created standards for the creation of data monitors "as code" within our dbt repository.
  - Audited all existing alert configurations to ensure the right people received the right alerts.
  - Added support for monitoring the performance and build times of our dbt data models within Monte Carlo.
  - Restructured asset tagging and descriptions to make tables and columns more easily discoverable and to clarify their appropriate use.

DIRECTOR OF DATA SCIENCE APRIL 2021 – SEPTEMBER 2022
Remote Year London, UK

Led the design and deployment of the data infrastructure from scratch, taking the organization from a collection of poorly maintained Google sheets to a centralized data warehouse, metrics layer, and Tableau dashboarding in less than a year.

- Led the technical execution of implementing scalable solutions consisting of Fivetran, custom Python, dbt, Tableau, and other tooling to turn raw data into key metric reporting.
- Designed, developed, and deployed a random forest model for lead scoring new contacts.
- Built and maintained seasonally accurate sales and revenue forecasting models.
- Managed projects to implement industry standards and best practices for data modeling, access, documentation, and ensuring compliance with security and GDPR regulations.
- Built and maintained seasonally accurate sales and revenue forecasting models.

CONSULTANT AUGUST 2009 – APRIL 2021
Constellation Marketing, Analysis & Research *Denver, CO*

Constellation was a data consultancy that helped clients create useable data and then turn that data into actionable insights, especially in the field of digital marketing. Over the course of a decade, my team and I helped over 140 clients turn their insights into more effective marketing campaigns and more efficient business operations.

- Provided expert witness testimony in a number of trials, including one currently bound for the U.S. Supreme Court.
- Extensive use of both frequentist and Bayesian A/B testing to improve digital advertising performance.
- Created a Python machine learning model to improve digital marketing for Girl Scouts of Colorado and grow sales 10% within the first week.
- Developed a natural language processing (NLP) sentiment analysis dashboard using Python and SQL to capture and quantify all client earned media.
